

PROBLEM STATEMENT:

The online food ordering system sets up a food menu online from different hotels and restaurants and customers can easily place the order as per they like.

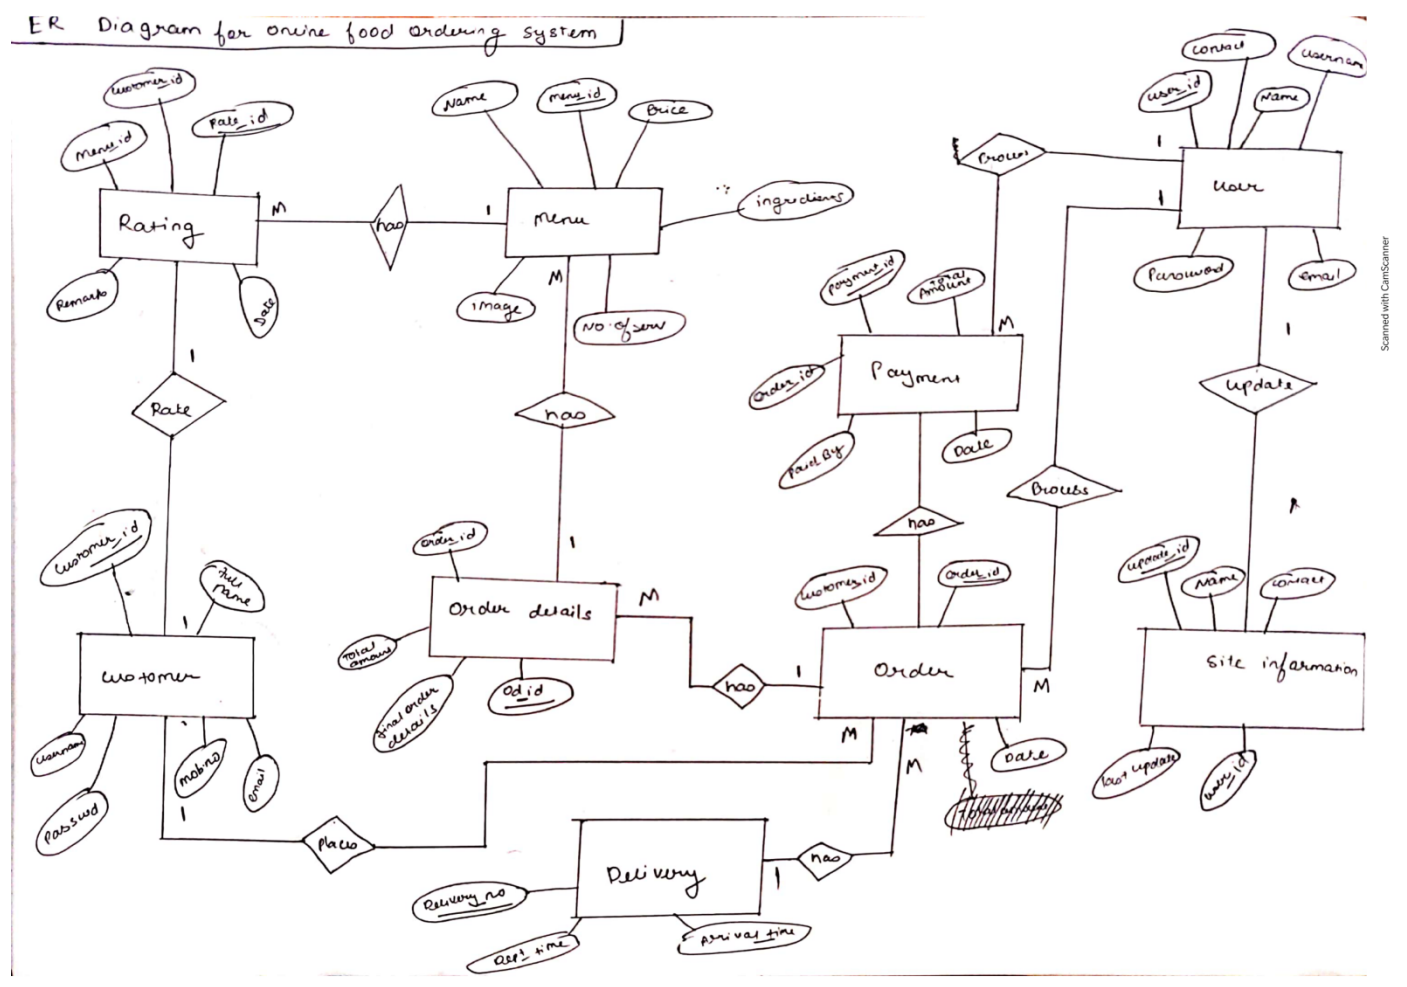

Also, the online customers can check their orders details. The management maintains customer's database, and improve food delivery service.

This system also provides a feedback system in which user can rate the food items.

The payment can be made online or cash or pay-on-delivery system.

For more secured ordering separate accounts are maintained for each user by providing them an ID and a password.
